The AutoCAD server and the client communicate over the network to exchange the graphics and data that are being created or edited. You can think of the AutoCAD client application and the AutoCAD server as the windows and the drawing board. The AutoCAD client application runs on the user's computer and allows the user to view, annotate, and modify data. The AutoCAD server application runs on the computer where the data is stored. The AutoCAD server and client applications are comprised of different components (see figure below),

which can be downloaded separately. These components work together to provide a simplified environment for working with drawings. The AutoCAD server components include the drawing database, plus all the required libraries and interfaces that allow other applications to create, modify, and view drawings. The drawing database provides the basis for the content and metadata of a drawing. The drawing database stores information about the drawing, such as the title, author, and other parameters that you enter. AutoCAD also stores information about the drawing's history, a way of storing drawings in a logical and chronological order. When you use AutoCAD, information from the drawing database is cached in the drawing cache. The drawing cache is a data structure used to quickly access drawings and their components. This structure is created

Application programming interfaces (APIs)

AutoCAD has various Application programming interfaces (APIs) in addition to the SDKs. They are designed for use in application extensions. They allow for programming new applications, or extending AutoCAD to perform different tasks. All APIs are available on GitHub. Application programming interfaces Autodesk Exchange, File Exchange, and Sketch Exchange are the main APIs offered for Autodesk Exchange Apps. Autodesk Exchange Autodesk Exchange is a service, and is provided by Autodesk. It is used to distribute new updates, applications, or extensions to AutoCAD and other Autodesk products and to collect feedback. It also features a rating system, where users can rate submitted apps and they are graded based on their quality. In order to use the exchange, one has to be a registered user. File Exchange The Autodesk File Exchange (also known as Autodesk File Transfer) is used to upload and download AutoCAD content. It is used for easy transfer of files between users. Sketch Exchange The Autodesk

Sketch Exchange is a service, and is provided by Autodesk. It allows users to upload and download 3D models. Autodesk Exchange-based application programming interfaces Autodesk Exchange Plugins: Autodesk Exchange Plugins, or AutoLISP plugin, provides an easy way to extend the functionality of AutoCAD and its applications. .NET plugins AutoCAD Plugins: AutoCAD Plugins'''', also known as a COM plugin, is a plugin that allows for external objects, such as third-party files, to be used as part of AutoCAD. Other plugins Other Autodesk Exchange Apps: Other Autodesk Exchange Apps, or Visual LISP plugin, allows users to create their own templates for creating parts.
