Sometimes, you may need to add the following, accessorizing photo features such as sharpening or adjusting lighting. These features are not present in any editor but instead add a layer of editing to a photo or video with minimal effort. The sharpening feature can even be automated for creating images in bulk! Effects are often applied sequentially starting from the bottom, and then composited together to create one result. Video Effects supports single-frame effects on a background or inserted frames, moving object effects and many more. The Color correction features help you to understand the color of a particular image and help in removing color cast, hue, chroma, brightness, contrast, white balance, tint, halo, gamma, saturation, a/b balance, and vignette effect. The adjustment tools like Levels, Curves, and Hue/Saturation (also known as ColorWheels) cut out unwanted color casts and help enhance contrast of the image either on a global or on a local scale. The Adjustment Layer feature lets you control the effect of individual exposure, lighting, hue, saturation, contrast, and image size on a selected area, to create realistic looking images.
