In the “Nailed it”, “Way, way too complicated”, and the “I'd rather have a PC” groups, my favorite responses were from professional photographers, who said the changes will disorient them. Of course, they'll say that, because Lightroom is a “vanity” app. When you export your file outside of Photoshop, you're doing so to Adobe's servers - your key is only as good as the one you used to log in when you open Photoshop. For that reason, many security services will block an installed copy of Photoshop (or even a pirated version) on the grounds that it will accept that key, which will let you get to the corrupt files. This update is a big deal in a lot of ways: there's lots of great new features to try out, there are substantial performance and memory gains, and the stability is great. I was able to work with the program for quite a bit before I noticed anything going awry. If you're already familiar with photoshopping, this update should prove as seamless as it gets. For those of you out there that have Photoshop, the availability of group invites is a testament to the new tools. It's very simple to create a group of people that can collectively edit with the Review for Edit functionality. The only thing is that you have to be online to create or invite people. In fact, I tried out the new tools — but I was offline at the time. The live online experience is indeed very, very nice. Of course, as any business in reality, even on the web, theft happens. In the past, you could sit down at your desk at any time and — provided your machine was attached to the internet — open up the application, but you'd see nothing. Now, you can update the file in Photoshop and the changes show up. The first time the file is imported into the newer version of PS, you receive an email from Adobe telling you it wants to inform you that it's detected a change and that you need to update to get the latest features.

Photoshop Camera is the first step. Lightroom is all about productivity and efficiency. The workflow you setup quickly, and quickly get feedback on the results of the edits you made. Whether you're a photographer or an image editor, Lightroom can do what you need it to do. With Lightroom, photos are more than the raw files. A perfectly lit shot can have issues all over the place. And it's not your fault. After all, the light is difficult to control as well. Lightroom is the most convenient way to get rid of dust and solve white balance issues. It's not uncommon for photographers to use Photoshop and even completely change the appearance and content of images they shoot. The photo they shoot may look perfect, but once they get to their computer, they have to get to work and clean up the mess, especially for traditionally-oriented people. And if you're hoping to make a lot of money as your primary goal, then you will definitely want to choose something that's affordable. As I mentioned above, programs such as Kuler are great for beginners, but they don't have any of the professional-grade tools that Photoshop does. 933d7f57e6
